Summary

Software Engineer with experience in building and scaling backend systems and full-stack applications across Java, Spring Boot, React, and AWS. Strong problem-solver, seeking to deliver high-impact systems.

Experience

Amazon — Bengaluru, India
Software Development Engineer I — *Jan 2026 - Present*

- **Offer Ranking Plugin**: Built a pre-ranking plugin within the offer-ranking system, serving 1B+ requests daily, to call an index API to detect items co-shippable with a customer's cart and augments the offer with an incentive amount; targeted a 2-3% unit-share uplift and multi-million-dollar annual shipping-cost savings across 8 international marketplaces.
- **Horizontal Multi Offer Display on the app**: End-to-end implementation of "Pair and Save" feature swatch for the Multi Offer Display in Amazon Shopping Experience for mobile and desktop in 4 worldwide marketplaces.
- **Infrastructure Teardown**: Verified zero production traffic across metrics and logs over a 2+ week window, then tore down the deprecated region end-to-end (CDK stacks, load-balancer relay configs, certificates, pipeline stages), eliminating a full regional fleet and its recurring operational cost.
- **Data Reconciliation**: Shipped a reconciliation Lambda and reusable Java library comparing source and destination records for data replication workflows, with CloudWatch metrics tracking success rate, processed, and failure counts.
- **AI On-Call Analyzer**: Built an AI-Native on-call analyzer that ingests tickets, logs, and runbooks to auto generate triage summaries and root-cause suggestions, cutting mean time to diagnose by 20% and easing on-call load.
- **Steady-State Validation**: Designed and implemented a CloudWatch-based steady-state validator for data replication workflows, orchestrating composite alarm checks and metric threshold validations via AWS Step Functions.

Kickdrum Technologies — Bengaluru, India
Software Engineer — *July 2024 - Nov 2025*

- **Performance Assessment Tool**: Engineered the Feedback module using React and AWS Lambda, enabling seamless performance tracking for over 200 employees.
- **PAT Migration**: Migrated the performance-assessment platform from an always-on to a fully serverless AWS architecture, cutting infrastructure cost by 90% while holding scalability through peak cycles.
- **Workflow Optimization**: Restructured and optimized a ColdFusion-based recursive workflow, reducing message delivery time from 120+ minutes to under 35 minutes (70% improvement).
- **Mentorship**: Mentored 2 SDE interns, providing design guidance and code reviews that helped them ship their internship project within the timeline.

Kickdrum Technologies — Bengaluru, India
Software Developer Intern — *Jan 2024 - June 2024*

- **Observability**: Improved application observability by creating 5+ Datadog dashboards for backend APIs and complete GCP performance monitoring.
- **Test Automation**: Developed a Cypress-based automated framework for validating content, delivery triggers, and backend API responses, reducing manual QA cycles and ensuring reliable communication for 50,000+ students.
- **Internet Booking Engine**: Collaborated with a team of software developers to build and deploy a scalable Internet Booking Engine website using React.js, Spring Boot, and AWS services, enhancing performance and user experience.

RM Applications — Remote
Software Developer Intern — *June 2023 - Sep 2023*

- **Membership Platform**: Developed the Email Blasting and File Upload & Preview modules for the membership platform, improving operational efficiency by 30%.
- **Search Functionality**: Designed a popup menu with a search functionality, reducing search time by 45% for users navigating through the membership system.

Education

UIET, Panjab University — Chandigarh, India
Bachelor of Engineering - Computer Science and Engineering; CGPA: 8.15/10 — *Nov 2020 - June 2024*

Technical Skills

Fundamentals: Data Structures & Algorithms, OOP, Git, Database Management, REST APIs
Languages: C++, Java, JavaScript, TypeScript, SQL
Frameworks: React.js, Node.js, Express.js, Spring Boot
Databases: MongoDB, MySQL, PostgreSQL, Amazon DynamoDB, Amazon RDS
AWS: Lambda, Step Functions, CloudWatch, S3

Achievements

- Specialist on Codeforces (rating: 1524) and ranked Knight on LeetCode (top 4.4% with a rating of 1897).
- Qualified for the final rounds of ReverseX Aptitude Contest and Programming Contest in the 2025-26 Shaastra Competition held at IIT Madras.
- Secured Rank 1 out of 230+ students in PUMEET examination at Panjab University, 2021.
